How to use

Example (source csproj, source files)

CSharp Project   **TestClass.cs**

This is the CSharp Project that references RSCG_TimeBombComment

```xml
<Project Sdk="Microsoft.NET.Sdk">
    <PropertyGroup>
        <OutputType>Exe</OutputType>
        <TargetFramework>net7.0</TargetFramework>
    </PropertyGroup>
    <PropertyGroup>
        <EmitCompilerGeneratedFiles>true</EmitCompilerGeneratedFiles>

<CompilerGeneratedFilesOutputPath>$(BaseIntermediateOutputPath)\GeneratedX</CompilerGe
    </PropertyGroup>
    <ItemGroup>
        <PackageReference Include="RSCG_TimeBombComment" Version="2023.5.9.2110" Outpu
ReferenceOutputAssembly="false" />
    </ItemGroup>
</Project>
```

This is the use of RSCG_TimeBombComment in TestClass.cs

```csharp
namespace Console_TimeBombComment;
internal partial class TestClass
{
    [Obsolete("this will be obsolete",TB_20230508)]
```

Generated Files

Those are taken from $(BaseIntermediateOutputPath)\GeneratedX

Obsolete_1.cs

```
namespace Console_TimeBombComment {
    partial class TestClass {
        const bool TB_20230508 = true;
    }
}
```
